Interagency Energy - Environment Research and Development Program  
Office of Research and Development U.S. Environmental Protection Agency

Fish and Wildlife Service

U.S. Department of the Interior

Volume Five

The Biological Services Program was established within the U.S. Fish and Wildlife Service to supply scientific information and methodologies on key environmental issues that impact fish and wildlife resources and their supporting ecosystems. The mission of the program is as follows:

- To strengthen the Fish and Wildlife Service in its role as a primary source of information on national fish and wildlife resources, particularly in respect to environmental impact assessment.
- To gather, analyze, and present information that will aid decision-makers in the identification and resolution of problems associated with major changes in land and water use.
- To provide better ecological information and evaluation for Department of the Interior development programs, such as those relating to energy development.

Information developed by the Biological Services Program is intended for use in the planning and decisionmaking process to prevent or minimize the impact of development on fish and wildlife. Research activities and technical assistance services are based on an analysis of the issues, a determination of the decisionmakers involved and their information needs, and an evaluation of the state of the art to identify information gaps and to determine priorities. This is a strategy that will ensure that the products produced and disseminated are timely and useful.

Projects have been initiated in the following areas: coal extraction and conversion; power plants; geothermal, mineral, and oil shale development; water resource analysis, including stream alterations and western water allocation; coastal ecosystems and Outer Continental Shelf development; and systems and inventory, including National Wetland Inventory, habitat classification and analysis, and information transfer.

The Biological Services Program consists of the Office of Biological Services in Washington, D.C., which is responsible for overall planning and management; National Teams, which provide the Program's central scientific and technical expertise and arrange for contracting biological services studies with states, universities, consulting firms, and others; Regional Staff, who provide a link to problems at the operating level; and staff at certain Fish and Wildlife Service research facilities, who conduct inhouse research studies.

AN ECOLOGICAL CHARACTERIZATION OF COASTAL MAINE  
(North and East of Cape Elizabeth)

Stewart I. Fefer and Patricia A. Schettig  
Principal Investigators

Volume 5

Data Source Appendix

The principal investigators wish to gratefully acknowledge the excellent guidance provided by the project's steering committee; the U.S. Fish and Wildlife Service National Coastal Ecosystems Team; and the contributions made by the many authors and reviewers.

Special recognition is warranted for John Parsons, for his invaluable technical editorial assistance, and for Beth Surgens, Cheryl Klink, and Renata Cirri for their tireless attention to production details throughout the study period.

The study was conducted as part of the Federal Interagency Energy/Environment Research and Development Program of the Office of Research and Development, U.S. Environmental Protection Agency; the U.S. Army Corps of Engineers Tidal Power Study; and the U.S. Fish and Wildlife Service National Coastal Ecosystems Project.

## THE DATA SOURCE APPENDIX

The Data Source Appendix is a computerized data base containing information on (1) all data sources and references used in the Maine Characterization and (2) general references pertaining to the Maine coast. This data base is currently operational and accessible at the U.S. Fish and Wildlife Regional Office, Newton Corner, MA. The data can be queried by topic, region, and many other variables.

The Data Source Appendix listing is organized alphabetically by author. Each entry contains the following information:

Accession number - an identification number assigned to each entry sequentially as it was entered in the data base;

Citation - author, publication date, title, publisher, or journal;

Region code number - this number identifies the region within the Characterization Area (see figure 1) to which the entry pertains. See table 1 for the key to the code numbers;

Reference type code number - this number provides information on the type of publication referenced, i.e., whether it is published or unpublished, etc. See table 1 for code key;

Who has - if the item is unpublished or generally not available, a contact is given to help the user obtain a copy;

Verification - the item may or may not be verified as a useful data source; and,

Key words - these words describe the general topics discussed in the data source. See table 2 for a complete listing of key word abbreviations and their definitions.

For more information on utilizing this data base, please contact:

TABLE 1  
KEY TO REGIONS AND REFERENCE TYPES LISTED  
IN THE DATA SOURCE APPENDIX

---

Regions (see Figure 1)

- 1 Casco
- 2 Kennebec-Sheepscot
- 3 Damariscotta - St. George
- 4 Penobscot
- 5 Mount Desert
- 6 Machias - Passamaquoddy
- 7 Other regions of Maine, coastal or inland, but applicable
- 8 Outside of Maine, but applicable; e.g. New Brunswick, North Sea

Reference Types

- 1 Map or chart
  - 2 Published (book, journal, proceedings, report)
  - 3 Unpublished memorandum, letter, personal communication
  - 4 Unpublished M.S. or Ph.D thesis, progress report, informal papers
  - 5 Unpublished and described in COMMENT
  - 6 Bibliography
-

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interests of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U. S. administration.
